

The Ultimate PCIe Gen3 Solution

Phison PS5015-E15T (Phison E15T) is the ultimate PCIe Gen3 NAND flash controller IC solution providing incomparable performance on the Gen3 interface with unmatched power efficiency and cost effectiveness. The E15T is the final station in the PCIe Gen3 DRAM-less swim lane boasting higher performance and lower power consumption than low-end Gen4 solutions while its DRAM-less design gives it an edge in cost competitions.

Application

PCIe Gen3 Client Platforms
Mainstream Game Consoles

Product Features

Unmatched Cost-effectiveness

As a refreshed, fully mature DRAM-less PCIe Gen3 solution, the E15T retains top-notch performance reaching above 3400MB/s in sequential operations while enabling compelling cost-savings to create invaluable design-in opportunities in cost-sensitive consumer markets.

Host Memory Buffer (HMB)

Phison E15T supports the Host Memory Buffer (HMB) feature, which creates a path for the an SSD to leverage some portion of the host system memory as the device's own buffering cache, and bypasses the use of costly on-board DRAMs .

Superb Power Efficiency

Phison E12/E12S supports up to 8 flash channels with 32 Chip Enable (CE) counts on both of the mainstream NAND flash interfaces in ONFI and Toggle, allowing capacity scaling from 512 GB up to 8 TB.

End-to-End Data Path Protection

From the entry through PHY to the access of NAND flash memory, data packages go through a series of encryption/decryption using various coding schemes, including but not limited to AES, CRC, and SEDEC, to gain a multi-layered protection over the course of delivery.
